SUMMARY:

Experienced data scientist with proficiency in Python, Machine Learning, and GCP Cloud. Exhibiting expertise in predictive modelling, data analysis and visualization. Adept in Big Query, ETL processes, and data-driven strategies.

LANGUAGES & SKILLS:

Python, SQL, Machine Learning (Scikit-Learn), Deep Learning (TensorFlow), Big Query (GCP), Vertex AI, Jira, Airflow, Talend, EDA, Streamlit, N8N, GenAi, RAG, VectorDB, Snowflake, Looker Studio, DBT, MongoDB, ETL, Tableau, Power BI, MLFlow (MLOps)

PROFESSIONAL EXPERIENCE:**Genpact:**

Chennai, India | Mar 2025 – May 2026

Data Science specialist:

- Led a Data Science team for Nissan business operations, driving AI/ML adoption to solve key business challenges.
- Introduced modern data-driven approaches, tools, and agile project management practices, improving delivery speed, stakeholder collaboration, and business decision-making.
- Developed and deployed LSTM forecasting models to predict paint job energy consumption with 98% R^2 score, enabling 3-month demand planning and cost optimization.
- Implemented automation and agentic AI workflows using n8n, streamlining repetitive tasks and improving process efficiency.
- Built a GenAI assistant using RAG and Chroma DB to provide fast, context-aware support for data guidance, tool usage, and deployment queries.
- Designed, built, and deployed a Streamlit-based portal for long-term stock maintenance (LTSM), enabling cross-functional teams to enter and update data through a user-friendly interface with real-time synchronization to an MS Access database.

Intelsat:

Chennai, India | Sep 2024 – Feb 2025

Data Scientist - II:

- Developed a robust LSTM model to predict and forecast CA data (Flight) for network usage trends over time with remarkable accuracy and robustness.
- Streamlined the post-prediction process by applying data mining techniques to consolidate predictions into a single cohesive file.
- Seamlessly integrated the processed data into Tableau dashboards to facilitate actionable business insights and support strategic discussions in placeholder meetings.

Renault Nissan Technology & Business Centre India

Chennai, India | June 2021 – Aug 2024

Data Scientist & Engineer:

- Applied advanced deep learning models (LSTM, Informer) to forecast electric vehicle battery State of Health (SOH) across regions, achieving 98.5% prediction accuracy; experiments tracked and optimized using MLflow.
- Attained a stellar 97% accuracy in predicting driver's subsequent actions through the application of a YDF based Random-Forest model implemented with TensorFlow Decision Forests (TF-DF).
- Exploited profile data to execute an unsupervised clustering technique, achieving a substantial 64% accuracy through the deployment of a Self-Organizing Map (SOM) model via neural networks.
- Utilizing advanced techniques like parallel processing, vectorization and BQ UDF, I efficiently pre-processed a massive dataset of 500 million records. This led to a substantial reduction in processing time and resulted in significant cost savings of 200k INR for the virtual machine.
- Developed visually appealing charts, encapsulating key insights in a dashboard designed for Renault's global presentations using Looker and Spotfire.
- Consistently enhancing prediction accuracy and mitigating losses across various factors.

- Proficiently crafting queries to create and update tables within the Big Query data warehouse using Airflow. These queries handle both structured and semi-structured data (Raw data) sourced from our Data Lake.
- Spearheading the development of a new project, "Mapda," aimed at visualizing data for manufacturing plants worldwide.
- Pioneered the growth and development of the BOM team, fostering success from the grassroots within the organization.

EDUCATION:

- MBA (Online): Operations and Data Sciences Management (NMIMS University) Mumbai | 2027
- PG Program: Data Science & Engineering (Great Lakes Institute of Management) Chennai | 2021
Relevant Coursework: SQL, Python, Machine Learning, Data Science, Statistics & Visualization
- Bachelor of Engineering: Mechanical Engineering (Anna University) Chennai | 2019

PERSONAL PROJECTS:

- F1 Champion prediction (Python, ML)
- Intel Image Classification (TensorFlow, CNN)
- Traffic Signs Detection (YOLO, Torch)
- Spaceship Titanic (TensorFlow, Keras)

PUBLICATIONS & ACHIEVEMENTS:

- Explanation of Py-Spark published by [Analytics Vidhya](#) in Medium. Sep 2021
- Data Preprocessing for Machine Learning published by [Analytics Vidhya](#) in Medium. May 2021
- **Quarterly Awards** 2024 [link](#). Q1 2024
- **Guest Lecture** – SRM University [link](#). Feb 2024
- **Developed** the [SOTAM](#) framework to automate LSTM modeling and cut down processing time. Dec 2024
